Flooded Type Water-Cooled Chillers

R134a

http://www.jci-hitachi.com
The New Water-Cooled Flooded Evaporator chiller with improved efficiency and functionality by incorporating several advanced technology and features. This series with the world’s best standard semi-hermetic screw compressors and newly designed shell and tube heat exchangers that have powerful cooling ability, low noise, low vibration, high efficiency and high reliability is the perfect answer to all your needs!

Enhanced Line-up: from 143RT to 458RT
- High-performance Semi-hermetic Screw Compressors
- High efficiency shell & tubes flooded type evaporators
- High efficiency shell & tubes condensers
- Highly efficient external 3 stages oil separator, up to 99.96% oil separation

Hitachi Semi-Hermetic Screw Chillers Show a Remarkable Energy-Saving Effect & are Friendly to the Global Environment

Global Warming Prevention
Energy saving by higher-efficiency screw chillers

Global warming refers to the phenomenon of global rising in average atmospheric temperatures due to increased volume of CO₂ & methane as a result of burning fossil fuels such as petroleum and coal. The 1995 IPCC* Report predicted that if the emission of CO₂ etc. continued as it was, the atmospheric temperature would rise by as much as 2°C by the end of the 21st century and, as a result, the sea level would rise by approx. 50 cm from the present level. In such circumstances, it is even more important to save the energy consumed by air conditioners in order to cut CO₂ emission.

*IPCC: Intergovernmental Panel on Climate Change

Ozone Layer Protection
Use of HFC134a refrigerant has an ozone depletion potential of zero

Chlorofluorocarbons (CFCs) in the stratosphere are exposed to ultraviolet rays which decompose them, and generate chlorine atoms. It is thought that the chlorine atoms combine with oxygen atoms in ozone to destroy the ozone. Because HFC134a has no chlorine atoms, it does not destroy the ozone in the atmosphere.
Technical Features

High COP

In the new model series, the power consumption is largely reduced over the current model series due to newly designed high-efficiency cooling system.

High efficiency oil separation

Design of external 3-stages oil separator

Special design of 3-stage oil separator outside, oil separates rate up to 99.96% and more

Lapsed time

Continuous Capacity Control Technology

Precise Capacity Control Technology

The temperature of the chilled water outlet can be kept at the set temperature ±1˚C by continuous capacity control, so it is suitable for industrial use.

Excellent Control Function

Liquid Crystal Screen Display

- Big colorful liquid crystal touch panel
- Message board function (for shift)
- Real time information
- Return to factory setting
- Time starting function

Building Management System (BMS)

A BMS-connecting interface can be supplied.
Flooded Type Water-Cooled Chillers

Notes:
1. The nominal cooling capacities are based on the GB/T18430.1
2. Applicable Power Source:
   Main Power Source (1kg) 380V 50Hz 240V 50Hz
   Control Power Supplies (1kg) 415V 50Hz 220V 50Hz
3. Working Range:
   Chilled Water Inlet/Outlet Temperature: 7°C to 12°C
   Condenser Water Inlet/Outlet Temperature: 35°C to 30°C
4. (*) marked with * is available by selection switch.
